Serial No.:10/516,859

Art Unit: 2618 Attorney Docket: PU020269

Listing and Amendments to the Claims

This listing of claims will replace all prior versions, and listings, of claims in the application.

- 1. (previously presented) Apparatus comprising:
 - a receiver for receiving an audio file signal;
 - a decoder for demodulating said audio file signal; and
- a processor for polling said decoder for a loss of a phase lock in said demodulating of said audio file signal.
- 2. (original) The apparatus of claim 1, wherein said processor resets and reinitializes said decoder in response to said loss in said phase lock.
- 3. (original) The apparatus of claim 1, wherein said receiver comprises 900 MHz radio frequency reception circuitry.
- 4. (previously presented) The apparatus of claim 1, wherein said decoder comprises an eight-to-fourteen modulation EFM decoder.
- 5. (original) The apparatus of claim 1, wherein said decoder outputs a digital audio stream.
- 6. (original) The apparatus of claim 5, wherein said digital audio stream conforms to an I2S audio stream.
- 7. (currently amended) A computer readable medium <u>having software instructions</u> recorded thereon, wherein the software instructions containing software instructions that, when executed by a processor, perform the steps of:

receiving a modulated audio file signal;

demodulating said modulated audio file signal;

Art Unit: 2618

Attorney Docket: PU020269

polling said demodulating for a loss in a phase lock in said demodulating; and resetting and reinitializing said demodulating in reply to said loss in said phase lock.

- 8. (original) The computer readable medium according to claim 7, wherein said demodulating is a digital eight-to-fourteen modulation digital decoding.
- 9. (original) The computer readable medium according to claim 7, wherein said receiving is synchronized to a 900 MHz range carrier frequency modulated by said audio file signal.
- 10. (original) The computer readable medium according to claim 7, wherein said demodulating outputs a digital audio stream.
- 11. (original) The computer readable medium according to claim 7, wherein said polling is carried out by a processor.
- 12. (previously presented) A method for detecting a signal loss in a wireless audio file signal transmission, said method comprising the steps of:

receiving an audio file signal;

decoding said audio file signal; and

polling said decoding for a loss of a phase lock in said decoding of said audio file signal.

- 13. (previously presented) The method of claim 12, further comprising the step of resetting and reinitializing said decoding in response to said loss in said phase lock in said decoding.
- 14. (original) The method of claim 12, wherein said step of receiving comprises 900 MHz range carrier frequency synchronizing.

Serial No.:10/516,859

Art Unit: 2618

Attorney Docket: PU020269

- 15. (original) The method of claim 12, wherein said step of decoding comprises an eight-to-fourteen bit modulation EFM decoding.
- 16. (original) The method of claim 12, wherein said step of decoding outputs a digital audio stream.
- 17. (original) The method of claim 16, wherein said digital audio stream conforms to an US audio stream.
